

Shiv Shrivastava

DevOps Engineer

+91-8770183929 | shrishiv09@gmail.com | Gurgaon, India | [LinkedIn](#)

PROFESSIONAL SUMMARY

DevOps Engineer with 6 years of experience specializing in **Azure, Terraform, Git, Docker, Kubernetes** and **CI/CD pipelines**.

- Demonstrated expertise in infrastructure automation, performance monitoring, and system optimization to support scalable, reliable, and secure environments.
- Proven ability to collaborate with cross-functional teams, streamline development workflows, and enhance deployment efficiency.
- Committed to driving project success, maintaining high operational standards, and ensuring continuous delivery and integration practices.
- Continuously exploring emerging tools and technologies to implement innovative DevOps solutions and foster ongoing improvement.

SKILL SET:

Infrastructure-as-Code

Application Maintenance &Support

Client/ Stakeholder Engagement

Azure DevOps

Version Control

CI/CD Pipeline

Project Management

IT Consulting

Team Management

IT SKILLS:

- **DevOps and Cloud:** Terraform, Azure, Git, GitHub, CI/CD Pipelines
- **Programming Languages:** YAML,Python
- **Development Methodologies:** Agile, SRE
- **Development Environments:** Visual Studio Code
- **Architecture and Design Patterns:** Blue-Green Deployment, Canary Release Pattern
- **Issue Tracking:** Jira, ServiceNow
- **Databases:** Azure SQL Database

PROFESSIONAL EXPERIENCE

IGT Solutions| DevOps Engineer– Automation

Dec 2021 – Present

Working as part of the DevOps team for the IndiGo FlightOps project, collaborating with cross-functional teams to automate infrastructure, streamline deployments, and enhance system reliability.

Key responsibilities include:

- Developed and maintained Infrastructure as Code (IaC) using **Terraform** for consistent, scalable provisioning across cloud environments including **Azure**.
- Gained hands-on experience with Docker for basic application containerization.
- Building and optimizing **CI/CD pipelines** to automate code integration, testing, and deployment processes.
- Managing version control workflows using **Git** and supporting GitLab-based CI/CD configurations.
- Collaborating with developers and **QA teams** to align infrastructure and automation strategies with project goals.
- Resolved complex issues in production, ensuring minimal downtime.
- Optimized code and queries to boost system performance and reduce latency.

Project: IndiGo FlightOps

Worked on the IndiGo FlightOps project to automate infrastructure, implement CI/CD pipelines, and support the deployment of flight operations applications. Focused on improving system reliability, scalability, and deployment efficiency in a cloud-native environment.

Key Modules of project:

- Login and registration
- Web and Server Communication with the App
- Chat Module
- Poll/Vote Module
- TCP Calls
- IoT Communication

Key Deliverables-

- Drove infrastructure automation using **Terraform**, aligning with project goals and industry standards for scalable and repeatable environments
- Led end-to-end **CI/CD pipeline implementation**, ensuring reliable and timely code delivery aligned with Agile/Scrum practices
- Acted as the primary point of contact, understanding business needs and offering strategic recommendations and solutions.
- Gathered requirements from stakeholders and developed technological analysis based on SRS and BRS documents.

Technologies Used: Terraform, Azure, CI/CD, Agile, Git/GitHub

Future Focus Infotech (Client: Lupin Pharmaceutical) | Azure Cloud Support Engineer Mar 2020- Nov 2021

- Provided infrastructure support and provisioning using **Terraform**, ensuring scalability and environment consistency.
 - Developed **CI/CD pipelines** for projects using **Azure Repo**, improving build speed and deployment reliability.
 - Offered solutions to the team, ensuring timely completion of tasks.
 - Conducted research & analysis for projects and generated comprehensive documentation.
 - Implemented end-to-end automation of build, test, and deployment pipelines using **Azure DevOps**.
 - Expertise in designing and deploying Azure Landing Zones using Terraform for secure, scalable, and compliant cloud infrastructure.
-

Renovision Automation (Client: HDFC Bank) | System Administrator Oct 2017 – Mar 2020

- Managed and supported virtual infrastructure in **Microsoft Azure**, including provisioning and monitoring of **Azure Virtual Machines, VNets, NSGs, and Storage Accounts**.
 - Implemented and maintained **Azure Active Directory (AAD)** for identity and access management, including **role-based access control (RBAC)** and conditional access policies.
 - Monitored and troubleshoot cloud services using **Azure Monitor, Log Analytics, and Application Insights**.
 - Maintained compliance with internal security standards and external regulations using **Azure Policy** and **Microsoft Defender for Cloud**.
 - Managed, monitored **Vmotion** of the VM's & V-motion of the storage.
 - Managed, monitored affinity rules for **VM's, Fault tolerance /high availability**.
 - Configured, monitored of **VMDK's** (Thin provisioning, Thick Eager Zeroed).
 - Configured, monitored volumes (luns/storage/SAN/RDM volumes, reclaim storage volumes)
 - Managed, monitored **VSphere/V-center patching** via update manager & CLI base.
 - Managed, monitored **VSphere/VM's network configuration** (NIC Teaming/binding with different type of policies, VLAN ID).
-

EDUCATION

BE, Computer Science | RGPV University | 2013-2017 | *Secured 1st Division*

PROJECT ANNEXURE

DevOps Automation for Pharmaceutical Application Platform – Lupin Pharmaceuticals

Worked on the end-to-end DevOps implementation for Lupin Pharmaceuticals' cloud-native application ecosystem, supporting R&D, supply chain, and regulatory compliance workflows. Leveraged **Azure Kubernetes Service (AKS)**, **Azure**, **Terraform** and **Azure DevOps** to automate infrastructure provisioning and CI/CD pipelines, ensuring **21 CFR Part 11 compliance**, high availability and rapid deployment across QA, UAT, and production environments.
